Phan Đức Anh

Java Developer

0867806182 pdanh.work@gmail.com Tu Liem - Ha Noi anhpd912.github.io/portfolio

OBJECTIVE

Short-term goal: Join as a Fresher Java Developer to contribute to real-world projects, strengthen my expertise in backend (Spring Boot ecosystem), and learn best practices from experienced engineers.
Long-term goal: Advance to a Mid-level Java Developer within 2-3 years, mastering scalable microservices and cloud infrastructure - and taking ownership of complete product features.

PROJECTS

SatoriNihongo - *Japanese Learning Support Application* 01/2026 - 05/2026

Role: Back-end Developer

- **Team size:** 5
- **Brief**: An AI-powered Japanese-language learning platform (JLPT N5-N1) built on a Spring Boot multi-module architecture (13 feature modules). Combines agentic RAG curriculum ingestion, a document-grounded AI tutor, automated pronunciation and roleplay assessment, and adaptive practice - backed by PostgreSQL + pgvector and Redis.
- **Programming Languages:** Java
- **Technologies**: Spring Boot 3.3.5, Spring AI, Spring Security, JWT, Spring Data JPA, Spring Application Events (event-driven cross-module)
- **Tools**: PostgreSQL + pgvector, Redis, OpenAI (GPT-4o), Google Document AI, Azure Speech , Cloudinary, Resend, Firebase FCM, Docker, Git
- **Key features:**
  - Agentic RAG curriculum import - scanned PDF ingestion; heading-aware chunking, embedding into pgvector, and Corrective/Self-RAG grounding verification with confidence-scored re-extraction to block hallucinations.
  - Document-grounded AI tutor - RAG chat scoped per curriculum via Spring AI advisor chain.
  - Real-time streaming - chat responses streamed to client over Server-Sent Events (SSE).
- **Github:** https://github.com/ThuyetTVHE186110/satori-learning-support-application-backend

Cognitive Lab - *AI-Powered Document Learning Platform* 05/2026 - Now

Role: Full-stack Developer

- **Team size**: 1
- **Brief**: A full-stack RAG (Retrieval-Augmented Generation) system that allows users to upload documents and interact with them via AI chat. Features include chunked file upload with async processing, vector-based semantic search, AI-generated learning roadmaps, progressive quiz generation, and real-time progress streaming via SSE.
- **Programming Languages:** Java
- **Technologies**: Spring Boot, Spring AI, Spring Security, JWT, Spring Data JPA, RabbitMQ
- **Tools**: PostgreSQL + pgvector, MinIO, Ollama, Docker, Git
- **Key features**:
  - RAG chat scoped per document using QuestionAnswerAdvisor + pgvector cosine similarity
  - Async quiz & roadmap generation via RabbitMQ with live SSE streaming to client
  - Stateless JWT auth with rotating refresh tokens.
- **Github:** https://github.com/anhpd912/cognitive-lab-server

WORK EXPERIENCES

FPT Software 2025 - Now

Korean Software Engineer

- Developed and maintained RESTful APIs system using Java, Spring Boot, and JPA within a modular monolithic architecture.
- Resolved technical bugs and optimized backend workflows, ensuring stable daily deployments for multi-module Maven setups.
- Directly collaborated with Korean colleagues utilizing TOPIK 5 proficiency to clarify business requirements, verify logic, and significantly reduce communication gaps.

SKILLS

Programming languages	Java, Python, JS/TS, HTML/CSS
Framework & Library	Spring Boot, Express.js React.js, Next.js

Tools & Platform	Postman/JUnit Git/Github, Docker
Databases	SQL Server, MySQL, PostgreSQL
Currently Learning	RabbitMQ, Kafka, Modular Monolithic Architecture
Languages	**English** (Intermediate) & **Korean** (Intermediate)
Soft Skills	Teamwork, problem-solving & self-learning

EDUCATION

FPT University Ha Noi 2022 - 2026

SOFTWARE ENGINEERING

GPA: 3.5

CERTIFICATIONS & AWARDS

(Korean) TOPIK 5 (201)	2026
(English) TOEIC L&R - 750	2025
Third Prize - Thai Binh Province Physics Olympiad (High School)	2022

ACTIVITIES

Member Of Expertise Department 04/2024 - Now

JS Club - Japanese Software Engineers

Actively participate in club activities, join algorithm competitions, and coding competitions within the club.
